Specialized Audio & Video Services for the Legal Profession

Transfer of Video Segments to Windows Media Files

This service is used to make segments of legal video & audio depositions immediately accessible on a laptop computer to the attorney in the court room.

First, we make a duplicate of the video tape as a safety. We also require a marked up transcript and an outline page to work from to create the segments.

The video & audio is converted to a CD with Icons & track numbers to provide rapid access to the material. The start & stop time date stamp recorded on the video is noted in an attached list and on the CD itself in the labels for the individual tracks.
Cost approx. \$150 per clip (Length of 3 to 5 minutes) plus the cost of duplicating each tape.
CDs replication is available

Redaction of existing videos in discovery

We will transfer the materials to a professional Video format and add time code.
You receive VHS tape of the original video with burned in time code.
With the coded VHS tape, you prepare an edit list or provide a marked up transcript.
We will then edit in the word "Redacted" over the indicated segments and copy the finished project to VHS. Cost approx. \$150 per hour plus tape stock, plus the cost of transferring the video to a professional format and duplicating each VHS tape.
A CD or DVD can also be created from the final material.

Filtering Audio to improve intelligibility

Frequently audio needs to be processed to improve intelligibility. Quoted by the Job

Forensic Video

Reviewing existing video & audio to determine if it has been altered and how.
